

Exponare and infoXpert Link Application

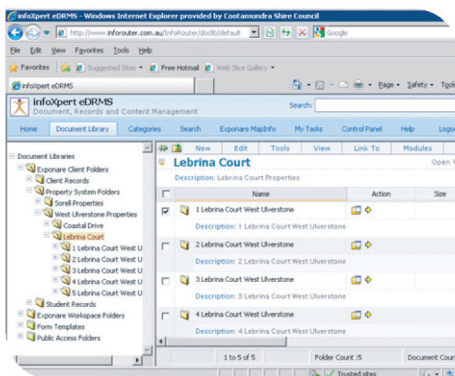

Looking for GIS and EDMS Integration? Are you getting the most from your GIS?

Lagen Spatial can provide an integrated solution to seamlessly link your Exponare software to the infoXpert suite.

Features of the Exponare and infoXpert Link Application :

Lagen Spatial have worked in conjunction with technical staff from infoXpert. Our team has written an external link application to link from a selected property in Exponare, execute the infoXpert web application and query the appropriate property record.

Users can also view a property record in the infoXpert environment, click a button which in turn executes Exponare and select the appropriate property on the map.

Key features include:

- Link from Exponare Enquiry to infoXpert
- Link from Exponare Public to infoXpert
- Link from infoXpert to Exponare Enquiry
- Link from infoXpert to Exponare Public

How can it help your council?

- Integrates your GIS with your EDMS, allowing a one stop shop for information
- User friendly, quick to install and minimal training required.

For further information on this exciting new development, packages available and its potential for your council, please contact Lagen Spatial on 1300 725 443, or email sales@lagenspatial.com.au
